Dear Curt and Dave – Stratus needs to provide better documentation of what the samples represent than just sending this e-mail. By just providing lab data and a chain of custody, we have no way to know where the samples were taken and what waste streams they represent. I also don't know how deep they have taken samples – I learned after our phone call on Friday that a test pit was dug in the Phase 1 area and contamination goes as deep as 18 feet below ground surface. I don't know if they took a sample at depth from this test pit so we probably have an incomplete picture of nature and extent of contamination.

Please do not respond to them on the sample results until you both and I discuss it further. I will tell Stratus/Geosyntec that they have to provide us with clarification on sample identification and locations.

This was intended to be a cost savings for their project, but if they can't provide decent documentation, then the proposal is off the table and EPA will enforce the soil removal criteria in the AOC and Work Plan.

Thanks!

Joyce

**Subject:** Recent Analytical data

Joyce, Curt and Dave,

Please find attached the analytical data received today. Please let me know if you have any questions. Level 4 data is in the drop box. Have a great weekend

Thanks TJK
